

WILL BURKERT

Infrastructure Engineer

Margate, Kent | 07973 794171 | Willburkert96@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFILE

Infrastructure engineer with 6+ years' experience supporting hybrid Microsoft cloud, Windows Server and network environments across critical national infrastructure, education and commercial operations. Combines hands-on administration of Microsoft 365, Entra ID, Intune, Active Directory and Cisco/Aruba networks with project delivery and PowerShell automation. Has supported estates of 500+ users, led cloud and telecoms migrations, and built tools that streamline identity and Exchange administration. Currently developing Azure expertise through AZ-900 and AZ-104 study.

TECHNICAL EXPERTISE AND PRACTICAL DEVELOPMENT

Microsoft cloud, identity and endpoint management: Developed through daily administration and project work across Microsoft 365, Azure, Entra ID, Intune, Exchange Online, Active Directory, Group Policy, SharePoint and OneDrive. Applied these skills while managing account lifecycles, permissions and devices, and while leading cloud file and collaboration migrations in hybrid environments.

PowerShell automation and infrastructure as code: Learned by replacing repetitive administrative tasks with working tools using PowerShell, Microsoft Graph and JSON. Projects include a cross-tenant Exchange migration toolkit and a GUI-based AD/hybrid Exchange account creator with validation, group copying, mailbox provisioning and migration hand-off. Applied Terraform in Azure-focused cloud lab and platform builds.

Networking and Windows infrastructure: Built through infrastructure and Assistant Network Manager roles covering Cisco and Aruba switching, VLANs, Wi-Fi, VPNs, DNS/DHCP, Windows Server, patching, backups and recovery. Used these skills to deliver network changes and troubleshoot connectivity and performance issues across multi-site and 24/7 services, reinforced through Network+ and CCNA study.

Web development and APIs: Developed through Level 5 Web Development study and completed GitHub projects using HTML, CSS, JavaScript, JSON and APIs, including a weather application, responsive business websites and portfolio work.

Service delivery and project leadership: Strengthened by managing helpdesk operations and working with ServiceNow, FreshService, AutoTask and SolarWinds. Led mobile network, SharePoint/OneDrive, MDM and infrastructure projects, coordinating suppliers, users, testing, documentation and post-go-live support.

SELECTED TECHNICAL PROJECTS

AD and Hybrid Exchange Account Creator

- Designed and built a PowerShell GUI that standardises employee onboarding across on-premises Active Directory and hybrid Exchange, replacing a lengthy sequence of manual administration steps.
- Added administrator credential prompting, live username and display-name checks, OU and manager selection, group copying, mailbox provisioning and optional Exchange Online migration-batch creation. Later converted company-specific settings into an INI-driven configuration so the tool can be reused in other environments.

Cross-Tenant Exchange Online Migration Toolkit

- Created modular PowerShell tooling for cross-tenant mailbox moves, covering prerequisite validation, target preparation, mail-flow configuration and migration status reporting.
- Turned a complex migration process into a repeatable workflow with clearer checks and output, making failures easier to identify and reducing the risk of missed configuration steps.

SharePoint and OneDrive Migration

- Led the movement of departmental file shares and user data into SharePoint and OneDrive, assessing existing structures, redesigning permissions and planning a phased rollout.
- Coordinated stakeholders, user communications and post-migration support, resolving access and synchronisation issues while improving secure remote access to business information.

Mobile Network Migration - Vodafone to O2

- Managed the end-to-end migration of the corporate mobile SIM estate, working with suppliers and users on provisioning, number porting, device configuration and cutover planning.
- Tracked each connection through migration and handled issues during the transition to maintain service continuity and minimise disruption to operational teams.

SafetyCulture Mobile Health and Safety Rollout

- Supported the rollout of SafetyCulture across company-managed iPads, configuring digital inspection forms, user access and mobile-device requirements for operational teams.
- Provided deployment support and ongoing administration, helping replace inconsistent manual processes with more structured and accessible health-and-safety data capture.

Network Infrastructure, VLAN and Wireless Improvements

- Planned and implemented network changes across Cisco and Aruba environments, including switch configuration, VLANs, wireless access points, firewalls, VPNs and supporting DNS/DHCP services.
- Used monitoring, testing and structured troubleshooting to diagnose connectivity and performance issues, while maintaining change records and technical documentation for future support.

IT Operations Automation Toolkit

- Built PowerShell utilities for recurring support tasks, including an RDS/Prophet logoff tool, SCCM client-action triggers, Active Directory user and group queries, and automated folder-change alerts.
- Designed the tools for use by support staff rather than only script authors, providing simple interfaces and consistent output to reduce repetitive work and improve incident response.

PROFESSIONAL EXPERIENCE

IT Technician | Port of Dover | *February 2026 - Present*

- Provide 2nd-line infrastructure and end-user support for 500+ users across a 24/7 landside, maritime and operational estate, prioritising incidents through ServiceNow.
- Administer identities, security groups, permissions and devices across Active Directory, Entra ID, Microsoft 365, Intune and hybrid services.
- Support operational technology, workstations and mobile devices across multiple port locations, resolving endpoint and network issues involving TCP/IP, VLANs and Wi-Fi.
- Maintain endpoint security, patching, encryption and asset lifecycle records using FreshService.
- Contribute to infrastructure improvement and automation work, including PowerShell tools for account provisioning and Exchange operations.

Assistant Network Manager | The Norton Knatchbull School | *April 2025 - November 2025*

- Managed core network services across routers, switches, firewalls, wireless access points and VPNs, maintaining availability and secure connectivity.
- Implemented network changes, configurations and upgrades, investigating performance bottlenecks, connectivity faults and security incidents.
- Administered hybrid infrastructure across Active Directory, Azure/Entra ID, Intune, Group Policy, Microsoft 365 and Windows Server.
- Owned patching schedules and technical documentation for servers and network devices.

Senior IT Analyst | Thanet Earth | *April 2022 - April 2025*

- Led day-to-day IT operations and helpdesk delivery for the wider business as the senior on-site analyst.
- Administered and secured hybrid services including Active Directory, Azure/Entra ID, Group Policy, Intune, Microsoft 365, SharePoint and OneDrive.
- Managed Windows servers, switches, VLANs, backups, endpoint deployment and monthly patching across the estate.
- Delivered major projects including SharePoint/OneDrive migration, a SafetyCulture mobile H&S rollout, an internal meeting-room solution, intranet development and the Vodafone-to-O2 mobile migration.
- Built scripts and internal tools to automate support and administration workflows, and coordinated suppliers and business stakeholders through delivery and post-go-live support.

1st/2nd Line Support Engineer | BCTEC | *April 2021 - April 2022*

- Delivered 1st and 2nd-line support across school environments, resolving hardware, software, server, printing and network incidents.
- Maintained Windows Server, Active Directory, Group Policy, Microsoft 365, network cabinets and wireless access points/controllers.
- Managed the mobile device estate through Lightspeed MDM and built and deployed Windows PCs and laptops.

Telecommunications Engineer | Kelly Group | *December 2019 - April 2021*

- Installed and maintained copper telecommunications infrastructure including poles, PCPs and underground cabling, diagnosing faults across the live network.
- Developed practical network troubleshooting, field safety, customer service and incident-resolution skills in a time-critical engineering environment.

EDUCATION AND PROFESSIONAL DEVELOPMENT

South Staffordshire College | Level 5 Diploma in Web Development - currently studying, expected 2027

Microsoft Azure | AZ-900 and AZ-104 - currently studying

Hadlow College | Level 3 Diploma in Animal Management (Pass), 2014 - 2016

Sandwich Technology School | GCSEs including English, Maths, Science, Business Studies and ICT, 2008 - 2014
